

Product Safety and Compliance Information

Product Details	
Product	SoftTie SL, SoftTie DL, SoftTie C und SoftTie <i>STRAPS</i>
Description	Highly elastic fastening ties
Material	TPU

Identified Risks and Safety Information

The use of elastic fastening bands has identified the following potential risks:

- **Overstretching or Material Fatigue:** Excessive stretching or repeated stress may cause the band to tear, leading to a sudden loss of tension and potential injury.
- **Rapid Snap-Back Effect:** A stretched band that is suddenly released may snap back quickly, potentially causing bruises or other injuries, especially if let go uncontrollably.

Risk Mitigation Measures

To minimize the identified risks, the following safety measures should be observed:

- **Controlled Handling:** Always maintain a firm grip on the band while stretching it and allow it to retract slowly. Do not stretch the band beyond the recommended holding force. Always let the stretched band return in a slow and controlled manner to prevent sudden snap-back.
- **Safety Distance:** Ensure that no other persons or fragile objects are nearby that could be struck by a snapping band.
- **Regular Inspection:** Check the band before each use for signs of wear, tears, or other damages. Do not use the band if any defects are detected.

Material and Recycling Information

The elastic band is made of thermoplastic polyurethane (TPU), a recyclable material. Dispose of the band in accordance with local recycling regulations for plastics.
